

Unit of Endocrinology
Department of Biomedical, Metabolic and Neural Sciences
University of Modena and Reggio Emilia
Modena, Italy
Director Prof. Manuela Simoni

The Unit of Endocrinology in Modena combines three different endocrinology fields, both clinical and research practice and basic research.

From a clinical point of view, the Unit of Endocrinology is the clinical center of reference for the Province of Modena, located in northern Italy. All endocrinological diseases were evaluated, from diagnosis to treatment and follow-up, considering diseases in thyroid, adrenal gland, pituitary, bone and metabolism (both diabetes mellitus and obesity/overweight). Moreover, the Unit of Andrology and Sexual Medicine has been recently developed, following all andrological topics, from sexual dysfunction to infertility.

The research activity includes both clinical and basic/transactional research studies. The clinical setting of the Unit of Endocrinology allows the conduction of clinical trials, both prospective and retrospective. Currently, more than ten clinical trials are ongoing. The molecular endocrinology laboratory allows basic/translational researches.

We offer an insight in our clinical and research settings, showing how these two souls of endocrinology could work together.

Program:

- Opportunity to participate in a clinical trial.
- Opportunity to write systematic review or case reports.
- Outpatient clinic in the following fields of endocrinology:
 - Thyroid
 - Adrenal gland
 - Pituitary gland
 - Bone
 - Diabetes mellitus
 - Metabolism, obesity and overweight
 - Andrology
- Multidisciplinary clinic, with the collaboration with surgeons and other Specialists, focusing on shared decision making

Starting period:

Any moment. Currently, due to COVID-19, anti SARS-CoV-2 vaccination is required. Furthermore, usually a declaration of good behaviour would be necessary.
